Troubleshooting Updater

RGL Updater

If you are troubleshooting a plugin not updating on a TF2 server running RGL's updater plugin, we have found that changing the map and then exec'ing one of the RGL configs will trigger the updater to actually pull the latest version of plugins that have not been updated. Here is an example of what we have seen before.

```
[SteamNetworkingSockets] Waited 3.0ms for SteamNetworkingSockets lock [SteamNetworkingSerializedFakeIP_t]
[SteamNetworkingSockets] Waited 3.0ms for SteamNetworkingSockets lock [SteamNetworkingSerializedFakeIP_t]
VAC secure mode is activated.
FakeIP allocation succeeded: 169.254.240.197:17440, 17441
'ctf_2fort' not present; not executing.
L 09/12/2024 - 20:11:39: [soap_tf2dm.smx] Failed to download spawns. StatusCode = 404, bFailure = 0, RequestSuccessful = 1.
L 09/12/2024 - 20:11:39: [soap_tf2dm.smx] No config for: ctf_2fort, searching for fallback...
L 09/12/2024 - 20:11:39: [soap_tf2dm.smx] path addons/sourcemod/configs/soap

```

Above is the console after restarting a server that contains some plugins that have a newer version available for download. We can see, however, the updater plugin is not pulling them.

RGL has made some changes to their own version of the updater that are being rolled out, and by changing the maps and exec'ing one of their config, it will trigger the updater to properly run and pull the latest plugins, which can be seen below.

```
L 09/12/2024 - 20:03:17: "Console<0><Console><Console>" say ""Exec rgl_off or restart your server 90 seconds after you have
fully finished playing.""
-----
sv_pure: Only allow client to use certain files.

-1 - Do not apply any rules or restrict which files the client may load.
0 - Apply rules in cfg/pure_server_minimal.txt only.
1 - Apply rules in cfg/pure_server_full.txt and then cfg/pure_server_whitelist.txt.
2 - Apply rules in cfg/pure_server_full.txt.

See cfg/pure_server_whitelist_example.txt for more details.

Current sv_pure value is 2.
