# Server Plugins

Plugins that may need extra configuration will have their relevant info posted here.

- Map Downloader

# Map Downloader

All FullBuff servers come with the MapDownloader plugin, found here:

https://github.com/spiretf/mapdownloader

This plugin allows for users to change the map to anything, even if the file is not on the server, as long as the map is present on the fastdl server.

Additionally, you can pass a url to `changelevel` to download a map from a different location. Due to limitations with tf2 you do need to replace the `://` in the url with `:/`: `rcon changelevel https:/someserver.com/somemap.bsp`
